ARCHITECTURE

Amanda Masi

Architecture material research spatial storytelling g

PORTLAND STATE UNIVERSITY

B.S. Architecture + Sustainable Urban Development minor

Portland, Oregon / Hawaii raised

Design grounded in experience.

I am a second-year architecture student at Portland State University. My work explores how light, sequence, material, and human experience shape space. At Vida Design, I support a working materials library and connect design study with the practical systems behind built environments.

CORE STRENGTHS

- Spatial analysis
- Physical models
- Hand drafting
- Visual communication
- Material research
- Library systems

SELECTED WORK

01	Casa Luis Barrag n	03
02	Evolution of a Cube	08
03	Drawing Studies	13
04	Materials in Practice	16

Seeking a part-time architecture internship where careful making, visual judgment, organization, and curiosity can contribute to a collaborative design practice.

Casa Luis Barragán

A measured drawing and model study of light, mass, privacy, and the gradual reveal of space.

ACADEMIC PRECEDENT STUDY

Original house and studio by Luis Barragán, completed in Mexico City in 1948. Measured drawings, model, photography, and analysis by Amanda Masi.

Measured plans

Three levels translated into one consistent drawing system.

01 / GROUND FLOOR

Entrance, living spaces, studio, and garden threshold.

02 03 / UPPER + ROOF

Private rooms and roof terrace shaped through layered privacy and enclosure.

Converting source measurements into a consistent scale strengthen the reading. The drawings became the foundation for the oblique and physical model.

ned accuracy, wall placement, and spatial physical model.

The complete oblique

A coordinated view of rooms, walls, circulation, and vertical relationships.

The oblique made the house legible as a layered volume rather than three separate plans. Two extracted rooms test the same projection at a closer scale and clarify the stair, opening, and enclosure relationships.

Spatial translations

Four complete studies isolate moments that are easy to miss in the full oblique.

A / EXTRACTED ROOM

B / EXTRACTED ROOM

C / ONE-POINT PERSPECTIVE 01

D / ONE-POINT PERSPECTIVE 02

Drawing into model

Making exposes relationships that remain abstract on paper.

01 / OVERHEAD ORGANIZATION

The overhead view verifies relationships between rooms, how changing walls frame the garden while maintainin

02 / REAR COURTYARD SEQUENCE

circulation, openings, and outdoor space. The courty ard view tests g privacy.

Constructing the house revealed where the drawings need ed correction. Photographing the model then tested scale, compression, openness, sunl ight, and the sequence of occupation. The house became more than a plan set: it became an envi ronment shaped around human experience.

The Evolution of a Cube

A geometric operation becomes an occupied landscape through iteration, light, and material.

PROCESS, NOT A SINGLE OBJECT

The final pin-up gathers formal transformations, site development, perspectives, and the topographic model into one continuous design process.

Generate a formal language

Cut, shift, project, and reassemble before assigning use.

01 / TRANSFORM

02 / ITERATE

03 / INHABIT

DESIGN MOVE

A repeated edge language carries the cube from solid object toward threshold, room, stair, and path.

Loose sketches introduce openings, scale figures, enclosure, and light. Each drawing asks what the previous transformation could become spatially rather than treating the first idea as final.

Give the object a ground

Topography, water, and circulation turn the cube into a sequence.

SITE / APPROACH

A long diagonal approach crosses layered terrain before reaching and changing enclosure create a movement from meditative priva

INTERIOR / OCCUPATION

the transformed cube. Inside, small openings
cy toward an elevated, outward-facing view.

Build the atmosphere

Maritime references shape enclosure, exposure, movement, and lig

ht.

SPATIAL NARRATIVE

The lower rooms evoke an underwater condition through depth, filtered light, and enclosure. Rising through the landscape opens toward an exposed, deck-like overlook.

Constructing the atmosphere

APPROACH

LANDSCAPE

ILLUMINATED INTERIOR

Corrugated contours form a tactile ground; basswood bridges changes in elevation; blue acrylic suggests water; and miniature figures establish scale. A concealed blue wall reflects colored light into the interior without revealing the painted surface itself, inspired by Steven Holl's Chapel of St. Ignatius.

From formal transformation to approach, threshold, enclosure, and release.

Drawing spatial ideas

Observation, atmosphere, texture, depth, and projection explore d by hand.

COLLAGE + CHARCOAL

Fragments become one architectural atmosphere through perspective, layering, light, and shadow.

Window + spatial depth

Foreground, middle ground, and background established through line, value, overlap, and detail.

TEXTURE / BAG + HEATER

NEGATIVE SPACE / LEAVES

Projection + early digital work

Coordinated views translate objects and spaces through two-dimensional conventions.

ORTHOGRAPHIC LAMP STUDY

Plans, elevations, and perspectives are coordinated through alignment and projection. Early AutoCAD and Illustrator work extends the same attention to hierarchy, line, and legibility into digital tools.

Materials in practice

A working library connects design intent with clear systems, vendor or knowledge, and responsible resource management.

MATERIALS LIBRARY ASSISTANT

I maintain an accessible resource for designers and vendor representatives by organizing finishes, creating references and wayfinding, supporting displays, coordinating returns, and improving everyday navigation.

PRACTICE VALUES

ACCESS

CLARITY

CARE

STEWARDSHIP

Access + stewardship

Clear systems make a materials library easier to use and reduce avoidable waste.

RESPONSIBLE MATERIAL FLOW

Unused samples are sorted by brand for vendor return, Material Bank return, recycling, donation, or reuse. Discarding is treated as a last resort. The work connects daily library maintenance with the broader material lifecycle.

Let's build something thoughtful.

Seeking a part-time architecture internship in Portland.
